

1 Package header

We load the required packages needed for L^AT_EX3, and the package header.

```
1 \*package
2 \@@=yoin
```

Necessary packages: First, L^AT_EX3 stuff.

```
3 \RequirePackage{expl3,l3keys2e,l3regex,xparse}
```

From zref bundle, for computing the total number of pages.

```
4 \RequirePackage{zref-totpages}
```

We need the absolute paths. This also means we need `-recorder` option to pdf_latex.

```
5 \RequirePackage[abspath]{currfile}
```

Package header.

```
6 \ProvidesExplPackage{yoin}{2016/02/28}{v0.0.1}{Joining articles into issues}
```

2 General macros

Macros not necessarily related to the package; moreorless an addition to L^AT_EX3.

`\yoin_seq_gappend_clist:Nn` Globally append `clist` #2 to `seq` #1.

```
7 \cs_new_protected:Nn \yoin_seq_gappend_clist:Nn {
8   \seq_set_from_clist:Nn \l__yoin_tmpa_seq { #2 }
9   \seq_gconcat:NNN #1 #1 \l__yoin_tmpa_seq
10 }
```

(End definition for \yoin_seq_gappend_clist:Nn. This function is documented on page ??.)

`\yoin_keys_set_from_file:nn` Read a file #2 containing a key–value list and set the keys for #1. No checks are done here, nothing like comments could be used, the keys should be separated by a comma (and spaces of course as needed).

```
11 \cs_new_protected:Nn \yoin_keys_set_from_file:nn {
12   \tl_set_from_file:Nnn \l_tmpa_tl { } { #2 }
13   \keys_set:nV { #1 } \l_tmpa_tl
14 }
15 \cs_generate_variant:Nn \keys_set:nn { nV }
```

(End definition for \yoin_keys_set_from_file:nn. This function is documented on page ??.)

3 Key-value interface for the package setup

First, we define the variables to store the keys.

```
\g_yoin_subprocess_bool Booleans:
  \g_yoin_article_bool 16 \bool_new:N \g_yoin_subprocess_bool
  \g_yoin_dryrun_bool 17 \bool_new:N \g_yoin_article_bool
\g_yoin_onlyflags_bool 18 \bool_new:N \g_yoin_dryrun_bool
  \g_yoin_onlytags_bool 19 \bool_new:N \g_yoin_onlyflags_bool
                        20 \bool_new:N \g_yoin_onlytags_bool
```

(End definition for \g_yoin_subprocess_bool and others. These functions are documented on page ??.)

```
\g_yoin_flags_seq Sequences for flags, tags and their filtering:
  \g_yoin_tags_seq 21 \seq_new:N \g_yoin_flags_seq
\g_yoin_onlyflags_seq 22 \seq_new:N \g_yoin_tags_seq
  \g_yoin_onlytags_seq 23 \seq_new:N \g_yoin_onlyflags_seq
                        24 \seq_new:N \g_yoin_onlytags_seq
```

(End definition for \g_yoin_flags_seq and others. These functions are documented on page ??.)

```
msg: unknown-flag Two messages, for unknown flags and unknown tags.
msg: unknown-tag 25 \msg_new:nnnn { yoin } { unknown-flag }
                  26 { The ~ flag ~ '#1' ~ is ~ unknown ~ to ~ 'yoin'. }
                  27 { You ~ either ~ misspelled ~ it ~ or ~forgot ~ to ~ declare ~ it. }

                  28 \msg_new:nnnn { yoin } { unknown-tag }
                  29 { The ~ tag ~ '#1' ~ is ~ unknown ~ to ~ 'yoin'. }
                  30 { You ~ either ~ misspelled ~ it ~ or ~forgot ~ to ~ declare ~ it. }
```

(End definition for msg: unknown-flag and msg: unknown-tag. These functions are documented on page ??.)

```
\yoin_if_tag_defined:n Conditionals for checking whether a tag/flag was defined.
\yoin_if_flag_defined:n 31 \prg_new_protected_conditional:Nnn \yoin_if_tag_defined:n { T, F, TF } {
                        32 \seq_if_in:NnTF \g_yoin_tags_seq { #1 } { \prg_return_true: } { \prg_return_false: }
                        33 }
                        34 \prg_new_protected_conditional:Nnn \yoin_if_flag_defined:n { T, F, TF } {
                        35 \seq_if_in:NnTF \g_yoin_flags_seq { #1 } { \prg_return_true: } { \prg_return_false: }
                        36 }
                        37 \cs_new_protected:Nn \__yoin_error_if_tag_undefined:n {
                        38 \yoin_if_tag_defined:nF { #1 } { \msg_error:nnn { yoin } { unknown-tag } { #1 } }
```

```

39 }
40 \cs_new_protected:Nn \__yoin_error_if_flag_undefined:n {
41   \yoin_if_flag_defined:nF { #1 } { \msg_error:nnn { yoin } { unknown-flag } { #1 } }
42 }

```

(End definition for \yoin_if_tag_defined:n and \yoin_if_flag_defined:n. These functions are documented on page ??.)

`yoin / general` The keys themselves:

```

43 \keys_define:nn { yoin / general } {

```

Booleans:

```

44   dryrun .bool_gset:N = \g_yoin_dryrun_bool,
45   dryrun .initial:n = { false },

46   article .bool_gset:N = \g_yoin_article_bool,
47   article .initial:n = { false },

48   subprocess .bool_gset:N = \g_yoin_subprocess_bool,
49   subprocess .initial:n = { false },

```

Keys whose clist values are appended to a seq:

```

50   defineflags .code:n = \yoin_seq_gappend_clist:Nn \g_yoin_flags_seq { #1 },

51   definetags .code:n = \yoin_seq_gappend_clist:Nn \g_yoin_tags_seq { #1 },

```

A clist key is stored in a seq, also, a corresponding bool is set true. (The point is, if onlyflags/onlytags is not ever set up, we want to know it since we treat it as if we use all flags/tags.

```

52   onlyflags .code:n =
53     \seq_gset_from_clist:Nn \g_yoin_onlyflags_seq { #1 }
54     \bool_gset_true:N \g_yoin_onlyflags_bool
55   ,

56   onlytags .code:n =
57     \seq_gset_from_clist:Nn \g_yoin_onlytags_seq { #1 }
58     \bool_gset_true:N \g_yoin_onlytags_bool
59   ,

60 }

```

(End definition for yoin / general. This function is documented on page ??.)

`\ProcessKeysPackageOptions` Process key options given to the package. We do not want to process any options given to the class. Whence `\ProcessKeysPackageOptions` and not `\ProcessKeysOptions`.

```

61 \ProcessKeysPackageOptions { yoin / general }

```

(End definition for `\ProcessKeysPackageOptions`. This function is documented on page ??.)

```
\yoin_setup:n Allow keys to be set later. We define both a  $\TeX$ 3 interface and an xparse UI wrapper.
\yoinSetup
62 \cs_new_protected:Nn \yoin_setup:n {
63   \keys_set:nn { yoin / general } { #1 }
64 }

65 \NewDocumentCommand \yoinSetup { R[]{} } {
66   \yoin_setup:n { #1 }
67 }
```

(End definition for `\yoin_setup:n` and `\yoinSetup`. These functions are documented on page ??.)

4 `\yoinAdd` macro — adding articles to the issue

The key–value interface. In this case, we basically only store the keys for each article in a prop. First, an interface for setting the keys for the articles. `\yoin_yoinadd_prop:n` returns the name of the prop for the given article; *no check for existence is done at this place*.

```
\g_yoin_yoinadd_seq A sequence for storing the list of the existing articles.
68 \seq_new:N \g_yoin_yoinadd_seq
```

(End definition for `\g_yoin_yoinadd_seq`. This function is documented on page ??.)

```
\yoin_yoinadd_prop:n \yoin_yoinadd_prop:n returns the name of the prop for the given article; no check for existence is done at this place. \yoin_yoinadd_prop:V
\yoin_yoinadd_prop:V yoinadd_prop:nn returns property #2 of article #1, or \q_no_value if the property is not set.
\yoin_yoinadd_prop_item:nn
\yoin_yoinadd_prop_item:Vn
69 \cs_new:Nn \yoin_yoinadd_prop:n {
70   g__yoin_article_#1_prop
71 }
72 \cs_generate_variant:Nn \yoin_yoinadd_prop:n { V }

73 \cs_new:Nn \yoin_yoinadd_prop_item:nn {
74   \prop_item:cn { \yoin_yoinadd_prop:n { #1 } } { #2 }
75 }
76 \cs_generate_variant:Nn \yoin_yoinadd_prop_item:nn { V }
```

(End definition for `\yoin_yoinadd_prop:n` and others. These functions are documented on page ??.)

For processing `\yoinAdd`, we first set up a `\tl` to contain the name of the article, then create the prop, and finally use `\keys` to fill in the prop. Note that if an article is added twice, an error is issued, if the error is ignored, the article is not added but the properties are set.

`\l_yoin_yoinadd_currentarticle_tl` A `tl` that stores the name of the article that is being processed by `\yoinAdd`.

```
77 \tl_new:N \l_yoin_yoinadd_currentarticle_tl
```

(End definition for `\l_yoin_yoinadd_currentarticle_tl`. This function is documented on page ??.)

`_yoin_yoinadd_storekey:nn` Internal macro for storing a key in the prop.

```
78 \cs_new_protected:Nn \_yoin_yoinadd_storekey:nn {
79   \prop_gput:cnn { \yoin_yoinadd_prop:V \l_yoin_yoinadd_currentarticle_tl } { #1 } { #2 }
80 }
```

(End definition for `_yoin_yoinadd_storekey:nn`. This function is documented on page ??.)

`\yoin_yoinadd:nn` The macro `\yoinAdd` itself. We first set `\l_@@_yoinadd_currentarticle_tl`, then check whether the same article has not been processed before (issuing an error in that case and finishing). Then, the article is added in `\g_yoin_yoinadd_seq`, the prop created, the article's name added in the prop with key `article` and the keys are set. If the article has a `.yoin` file in its sub-directory, the key-values in it is added to the prop. If the file does not exist, it means things are wrong (the article should first be set up, before being added to its issue by `\yoinAdd`).

`\yoinAdd`

```
81 \cs_new_protected:Nn \yoin_yoinadd:nn {
82   \tl_set:Nn \l_yoin_yoinadd_currentarticle_tl { #1 }
83   \seq_if_in:NnTF \g_yoin_yoinadd_seq { #1 } {
84     \msg_error:nnn { yoin } { yoinadd-duplicatearticle } { #1 }
85   } {
86     \seq_gput_right:Nn \g_yoin_yoinadd_seq { #1 }
87     \prop_new:c { \yoin_yoinadd_prop:n { #1 } }
88     \_yoin_yoinadd_storekey:nn { article } { #1 }
89     \keys_set:nn { yoin / yoinadd } { #2 }
90     \file_if_exist:nTF { #1 / #1 .yoin } {
91       \yoin_keys_set_from_file:nn { yoin / yoinaddfromarticle } { #1 / #1 .yoin }
92     } {
93       \msg_error:nnn { yoin } { yoinadd-dotyoinmissing } { #1 }
94     }
95   }
96 }

97 \NewDocumentCommand \yoinAdd { m O{} } {
98   \yoin_yoinadd:nn { #1 } { #2 }
99 }
```

(End definition for `\yoin_yoinadd:nn` and `\yoinAdd`. These functions are documented on page ??.)

`msg: yoinadd-duplicatearticle` The error messages: for adding a duplicate article and for adding an article with no #1/#1.yoin file.

```

100 \msg_new:nnn { yoin } { yoinadd-duplicatearticle }
101   { The ~ article ~ "#1" ~ has ~ been ~ already ~ processed ~ by ~ \token_to_str:N \yoinAdd ~.}
102 \msg_new:nnn { yoin } { yoinadd-dotyoinmissing }
103   { The ~ article ~ "#1" ~ has ~ no ~ file "#1/#1.yoin" ~ and ~ was ~ not ~ properly ~ set ~ up.}

```

(End definition for msg: yoinadd-duplicatearticle and msg: yoinadd-dotyoinmissing. These functions are documented on page ??.)

`yoin / yoinadd` The keys here are pretty simple; each defined key just stores its value in the prop. We recall that #1 is the key and ##1 is the value.

```

104 \clist_map_inline:nn { forceopenany, forceopenright, ignore } {
105   \keys_define:nn { yoin / yoinadd } {
106     #1 .code:n = \__yoin_yoinadd_storekey:nn { #1 } { ##1 },
107   }
108 }

```

However, for the tag key, we additionally check that the tag exists.

```

109 \keys_define:nn { yoin / yoinadd } {
110   tag .code:n =
111     \__yoin_error_if_tag_undefined:n { #1 }
112     \__yoin_yoinadd_storekey:nn { tag } { #1 }
113   ,
114 }

```

(End definition for yoin / yoinadd. This function is documented on page ??.)

```

115 \keys_define:nn { yoin / yoinaddfromarticle } {
116   unknown .code:n =
117     \__yoin_yoinadd_storekey:Vn \l_keys_key_tl { #1 }
118   ,
119 }

```

5 Environment yoinshell

`\l_yoin_yoinshell_ignore_bool` A boolean for storing the ignore key's value.

(End definition for \l_yoin_yoinshell_ignore_bool. This function is documented on page ??.)

`yoin / yoinshell` Key-value interface to yoinshell.

```

120 \keys_define:nn { yoin / yoinshell } {

```

If flag is set and onlyflags is set but the flag is not amongst them, the whole yoinshell is ignored (by setting the ignore key).

```

121   flag .code:n =
122     \__yoin_error_if_flag_undefined:n { #1 }
123     \bool_if:NT \g_yoin_onlyflags_bool {
124       \seq_if_in:NnF \g_yoin_onlyflags_seq { #1 } {
125         \keys_set:nn { yoin / yoinshell } {
126           ignore = true
127         }
128       }
129     }
130   ,

```

The ignore key sets a boolean

```

131   ignore .bool_set:N = \l_yoin_yoinshell_ignore_bool,
132   ignore .initial:n = { false },
133 }

```

(End definition for yoin / yoinshell. This function is documented on page ??.)

`shellesc.sty` A reasonable shell escape that should work in both pdf_latex and lua_latex in T_EX Live 2016.

```

\ShellEscape
\__yoin_yoinshell_shellescape:n
134 \file_if_exist:nTF { shellesc.sty } {
135   \RequirePackage { shellesc }
136 } {
137   \def \ShellEscape #1 { \immediate \write 18 { #1 } }
138 }
139 \cs_new_protected:Nn \__yoin_yoinshell_shellescape:n {
140   \ShellEscape { #1 }
141 }

```

(End definition for shellesc.sty, \ShellEscape, and __yoin_yoinshell_shellescape:n. These functions are documented on page ??.)

`__yoin_yoinshell_begin:n` Environment yoinshell (one key–value argument). We perform some local definitions that should stay local, so we put everything in a group. The keys are set. Then we define the macros — “shell commands”. If ignore is set, these macros are declared to do nothing, otherwise they are simply wrappers to the L^AT_EX3 counterparts.

```

142 \cs_new_protected:Nn \__yoin_yoinshell_begin:n {
143   \group_begin:
144   \keys_set:nn { yoin / yoinshell } { #1 }
145   \bool_if:NNTF \l_yoin_yoinshell_ignore_bool {
146     \DeclareDocumentCommand \RunForEach { O{} m } { { }
147     \DeclareDocumentCommand \Run { O{} m } { { }

```

```

148   } {
149       \DeclareDocumentCommand \RunForEach { 0{} m } { \yoin_yoinshell_runforeach:nn { ##1 } { ##2 } }
150       \DeclareDocumentCommand \Run { 0{} m } { \yoin_yoinshell_run:nn { ##1 } { ##2 } }
151   }
152 }

153 \cs_new_protected:Nn \__yoin_yoinshell_end: {
154     \group_end:
155 }

156 \NewDocumentEnvironment { yoinshell } { 0{} } {
157     \__yoin_yoinshell_begin:n { #1 }
158 } {
159     \__yoin_yoin_yoinshell_end:
160 }

```

(End definition for __yoin_yoinshell_begin:n, __yoin_yoinshell_end:, and {yoinshell}. These functions are documented on page ??.)

The yoinshell command \RunForEach.

\l__yoin_yoinshell_runforarticle_tag_tl First, two tls that will store tags: One for the tag of the article, one that could be passed to \RunForEach that is initially set to \l__yoin_yoinshell_runforeach_onlytag_tl \q_no_value.

```

161 \tl_new:N \l__yoin_yoinshell_runforarticle_tag_tl
162 \tl_new:N \l__yoin_yoinshell_runforeach_onlytag_tl
163 \tl_set:Nn \l__yoin_yoinshell_runforeach_onlytag_tl { \q_no_value }

```

(End definition for \l__yoin_yoinshell_runforarticle_tag_tl and \l__yoin_yoinshell_runforeach_onlytag_tl. These functions are documented on page ??.)

yoin / runforeach So far, the only key-val passable to \RunForEach is onlytag, which tests for the tag to be declared and passes it to \l__@_yoinshell_runforeach_onlytag_tl.

```

164 \keys_define:nn { yoin / runforeach } {
165     onlytag .code:n =
166         \__yoin_error_if_tag_undefined:n { #1 }
167         \tl_set:Nn \l__yoin_yoinshell_runforeach_onlytag_tl { #1 }
168     ,
169 }

```

(End definition for yoin / runforeach. This function is documented on page ??.)

_yoin_yoinshell_runforarticle_keyfromprop:nnN This macro lets #3 to the value of property #2 of article #1. It makes it an empty definition if the property is unset.

```

170 \tl_new:N \__yoin_yoinshell_runforarticle_tmpa_tl
171 \cs_new_protected:Nn \__yoin_yoinshell_runforarticle_keyfromprop:nnN {
172     \prop_get:cnN { \yoin_yoinadd_prop:n { #1 } } { #2 } \l__yoin_yoinshell_runforarticle_tmpa_tl

```

```

173 \quark_if_no_value:NTF \l__yoin_yoinshell_runforarticle_tmpa_tl {
174   \def #3 {}
175 } {
176   \let #3 \l__yoin_yoinshell_runforarticle_tmpa_tl
177 }
178 }

```

(End definition for __yoin_yoinshell_runforarticle_keyfromprop:nnN. This function is documented on page ??.)

__yoin_yoinshell_runforeach:nn \RunForEach itself just sets the keys (in a group to make things local) and then calls \@@_yoinshell_runforarticle:nn on each article.

```

179 \cs_new_protected:Nn \yoin_yoinshell_runforeach:nn {
180   \group_begin:
181   \keys_set:nn { yoin / runforeach } { #1 }
182   \seq_map_inline:Nn \g_yoin_yoinadd_seq { \__yoin_yoinshell_runforarticle:nn { ##1 } { #2 } }
183   \group_end:
184 }

```

(End definition for __yoin_yoinshell_runforeach:nn. This function is documented on page ??.)

__yoin_yoinshell_runforarticle:nn If the tag passed to onlytag of \RunForEach is identical to the tag of the article or if any of them is not set, we do what should be done, otherwise nothing is done (the tags do not match). We only extract the prop to publically available macros like \Article, \Jobname etc. (in a group to make this local), and then run the command in shell escape.

```

185 \cs_new_protected:Nn \__yoin_yoinshell_runforarticle:nn {
186   \prop_get:cnN { \yoin_yoinadd_prop:n { #1 } } { tag } \l__yoin_yoinshell_runforarticle_tag_tl
187   \bool_if:nT {
188     \quark_if_no_value_p:N \l__yoin_yoinshell_runforarticle_tag_tl
189     ||
190     \quark_if_no_value_p:N \l__yoin_yoinshell_runforeach_onlytag_tl
191     ||
192     \tl_if_eq_p:NN \l__yoin_yoinshell_runforeach_onlytag_tl \l__yoin_yoinshell_runforarticle_tag_tl
193   }{
194     \group_begin:
195     \__yoin_yoinshell_runforarticle_keyfromprop:nNn { #1 } { article } \Article
196     \__yoin_yoinshell_runforarticle_keyfromprop:nNn { #1 } { jobname } \Jobname
197     \__yoin_yoinshell_shellescape:n { #2 }
198     \group_end:
199   }
200 }

```

(End definition for __yoin_yoinshell_runforarticle:nn. This function is documented on page ??.)

6 Article setting stuff (undocumented)

Information to be stored in an auxiliary file.

```
201 \cs_new_protected:Nn \__yoin_article_write:n {
202   \immediate \write \@auxout { \token_to_str:N \@writefile { yoin } { #1 } }
203 }
204
205 \cs_new_protected:Nn \__yoin_article_write_keyval:nn {
206   \__yoin_article_write:n { #1 ~ = ~ #2 , }
207 }
