1 Package header

```
We load the required packages needed for LATEX3, and the package header.
```

```
1 (*package)
2 (@@=yoin)
```

Necessary packages: First, LATEX3 stuff.

3 \RequirePackage{expl3,13keys2e,13regex,xparse}

From zref bundle, for computing the total number of pages.

4 \RequirePackage{zref-totpages}

We need the absolute paths. This also means we need -recorder option to pdflatex.

- 5 \RequirePackage[abspath]{currfile}
 - Package header.
- 6 \ProvidesExplPackage{yoin}{2016/02/28}{v0.0.1}{Joining articles into issues}

2 General macros

Macros not necessarily related to the package; moreorless an addition to ETFX3.

\yoin_seq_gappend_clist:Nn Globally append clist #2 to seq #1.

```
7 \cs_new_protected:Nn \yoin_seq_gappend_clist:Nn {
8   \seq_set_from_clist:Nn \l__yoin_tmpa_seq { #2 }
9   \seq_gconcat:NNN #1 #1 \l__yoin_tmpa_seq
10 }
```

(End definition for \yoin_seq_gappend_clist:Nn. This function is documented on page ??.)

\yoin_keys_set_from_file:nn

Read a file #2 containing a key-value list and set the keys for #1. No checks are done here, nothing like comments could be used, the keys should be separated by a comma (and spaces of course as needed).

```
11 \tl_new:N \l__yoin_keys_tmpa_tl
12 \cs_new_protected:Nn \yoin_keys_set_from_file:nn {
13  \tl_set_from_file:Nnn \l__yoin_keys_tmpa_tl { } { #2 }
14  \keys_set:nV { #1 } \l__yoin_keys_tmpa_tl
15 }
16 \cs_generate_variant:Nn \keys_set:nn { nV }
```

(End definition for \yoin_keys_set_from_file:nn. This function is documented on page ??.)

\voin keyval parse from file:m Read a file #2 containing a key-value list and set the keys for #1. No checks are done here, nothing like comments could be used, the keys should be separated by a comma (and spaces of course as needed).

```
17 \cs new protected: Nn \yoin keyval parse from file: NNn {
      \tl_set_from_file:Nnn \l__yoin_keys_tmpa_tl { } { #3 }
      \keyval_parse:NNV #1 #2 \l__yoin_keys_tmpa_t1
19
20 }
21 \cs_generate_variant:Nn \keyval_parse:NNn { NNV }
(End definition for \yoin_keyval_parse_from_file:nn. This function is documented on page ??.)
```

Key-value interface for the package setup

First, we define the variables to store the keys.

```
\g yoin subprocess bool
                          Booleans:
   \g yoin article bool
                          22 \bool_new:N \g_yoin_subprocess_bool
    \g yoin dryrun bool
                          23 \bool new: N \g yoin article bool
 \g yoin onlyflags bool
                          24 \bool new: N \g yoin dryrun bool
  \g_yoin_onlytags_bool
                          25 \bool new: N \g yoin onlyflags bool
                          26 \bool new: N \g yoin onlytags bool
                          (End definition for \g yoin subprocess bool and others. These functions are documented on page ??.)
      \g_yoin_flags_seq Sequences for flags, tags and their filtering:
       \g_yoin_tags_seq 27 \seq_new:N \g_yoin_flags_seq
  \g_yoin_onlyflags_seq 28 \seq_new:N \g_yoin_tags_seq
  \g_yoin_onlytags_seq 29 \seq_new:N \g_yoin_onlyflags_seq
                          30 \seq new:N \g yoin onlytags seq
                          (End definition for \g yoin flags seq and others. These functions are documented on page ??.)
           unknown-flag Two messages, for unknown flags and unknown tags.
            unknown-tag
                          31 \msg new:nnnn { yoin } { unknown-flag }
                                { The ~ flag ~ '#1' ~ is ~ unknown ~ to ~ 'yoin'. }
                                { You ~ either ~ misspelled ~ it ~ or ~forgot ~ to ~ declare ~ it. }
                          34 \msg new:nnnn { yoin } { unknown-tag }
                                { The ~ tag ~ '#1' ~ is ~ unknown ~ to ~ 'yoin'. }
                                { You ~ either ~ misspelled ~ it ~ or ~forgot ~ to ~ declare ~ it. }
                          (End definition for msg: unknown-flag and msg: unknown-tag. These functions are documented on page ??.)
```

```
\yoin if tag defined:n Conditionals for checking whether a tag/flag was defined.
\yoin if flag defined:n
                         37 \prg_new_protected_conditional:Nnn \yoin_if_tag_defined:n { T, F, TF } {
                                \seq if in:NnTF \g yoin tags seq { #1 } { \prg return true: } { \prg return false: }
                          39 }
                          40 \prg new protected conditional:Nnn \yoin if flag defined:n { T, F, TF } {
                               \seq_if_in:NnTF \g_yoin_flags_seq { #1 } { \prg_return_true: } { \prg_return_false: }
                          42 }
                          43 \cs_new_protected: Nn \__yoin_error_if_tag_undefined:n {
                                \yoin_if_tag_defined:nF { #1 } { \msg_error:nnn { yoin } { unknown-tag } { #1 } }
                          45 }
                          46 \cs_new_protected: Nn \__yoin_error_if_flag_undefined:n {
                               \yoin_if_flag_defined:nF { #1 } { \msg_error:nnn { yoin } { unknown-flag } { #1 } }
                          48 }
                          (End definition for \yoin if tag defined:n and \yoin if flag defined:n. These functions are documented on page ??.)
         yoin / general The keys themselves:
                          49 \keys define:nn { yoin / general } {
                          Booleans:
                                dryrun .bool_gset:N = \g_yoin_dryrun_bool,
                          50
                                dryrun .initial:n = { false },
                          51
                                article .bool gset: N = \g voin article bool,
                          52
                               article .initial:n = { false },
                          53
                                subprocess .bool gset: N = \g voin subprocess bool,
                          54
                                subprocess .initial:n = { false },
                          55
                          Keys whose clist values are appended to a seq:
                                defineflags .code:n = \yoin seq gappend clist:Nn \g yoin flags seq { #1 },
                               definetags .code:n = \yoin_seq_gappend_clist:Nn \g_yoin_tags_seq { #1 },
                          57
                          A clist key is stored in a seq, also, a corresponding bool is set true. (The point is, if onlyflags/onlytags is not ever set up, we want
                          to know it since we treat it as if we use all flags/tags.)
                          58
                                onlvflags .code:n =
                          59
                                   \seq_gset_from_clist:Nn \g_yoin_onlyflags_seq { #1 }
                          60
                                   \bool gset true: N \g yoin onlyflags bool
                          61
```

```
62
                                     onlytags .code:n =
                                        \seq gset from clist:Nn \g yoin onlytags seq { #1 }
                               63
                                        \bool gset true: N \g yoin onlytags bool
                               64
                               65
                               66 }
                               (End definition for yoin / general. This function is documented on page ??.)
\ProcessKeysPackageOptions
                              Process key options given to the package. We do not want to process any options given to the class. Whence \ProcessKeysPackageOptions
                               and not \ProcessKeysOptions.
                               67 \ProcessKeysPackageOptions { yoin / general }
                               (End definition for \ProcessKeysPackageOptions. This function is documented on page ??.)
              \yoin_setup:n Allow keys to be set later. We define both a ETFX3 interface and an xparse UI wrapper.
                 \yoinSetup
                              68 \cs_new_protected: Nn \yoin_setup:n {
                                     \keys_set:nn { yoin / general } { #1 }
```

70 }
71 \NewDocumentCommand \yoinSetup { R[]{} } {
72 \yoin_setup:n { #1 }
73 }

(End definition for \yoin setup:n and \yoinSetup. These functions are documented on page ??.)

4 \yoinAdd macro — adding articles to the issue

The key-value interface. In this case, we basically only store the keys for each article in a prop. First, an interface for setting the keys for the articles. \yoin_yoinadd_prop:n returns the name of the prop for the given article; no check for existence is done at this place.

\g_yoin_yoinadd_seq A sequence for storing the list of the existing articles.

74 \seq_new: N \g_yoin_yoinadd_seq

(End definition for \g_yoin_yoinadd_seq. This function is documented on page ??.)

```
\yoin yoinadd prop:n \yoin yoinadd prop:n returns the name of the prop for the given article; no check for existence is done at this place. \yoin -
       \yoin yoinadd prop: V yoinadd prop:nn returns property #2 of article #1, or \q no value if the property is not set.
\yoin yoinadd prop item:nn
                               75 \cs new:Nn \yoin yoinadd prop:n {
\yoin yoinadd prop item:Vn
                                      g__yoin_article_#1_prop
                                77 }
                               78 \cs_generate_variant:Nn \yoin_yoinadd_prop:n { V }
                                79 \cs_new:Nn \yoin_yoinadd_prop_item:nn {
                                      \prop_item:cn { \yoin_yoinadd_prop:n { #1 } } { #2 }
                               81 }
                                82 \cs_generate_variant:Nn \yoin_yoinadd_prop_item:nn { V }
                                (End definition for \yoin_yoinadd_prop:n and others. These functions are documented on page ??.)
                                    For processing \yoinAdd, we first set up a t1 to contain the name of the article, then create the prop, and finally use 13keys to fill
                               in the prop. Note that if an article is added twice, an error is issued, if the error is ignored, the article is not added but the properties
                                are set.
       \l yoin yoinadd currentarticle tl A tl that stores the name of the article that is being processed by \yoinAdd.
                               83 \tl_new:N \l__yoin_yoinadd_currentarticle_tl
                                (End definition for \l__yoin_yoinadd_currentarticle_tl. This function is documented on page ??.)
                               Internal macro for storing a key in the prop. The one-parameter variant sets the value of the key empty.
\__yoin_yoinadd_storekey:nn
\ voin voinadd storekey:n
                               84 \cs_new_protected: Nn \__yoin_yoinadd_storekey:nn {
                                      \prop gput:cnn { \yoin yoinadd prop: V \l yoin yoinadd currentarticle tl } { #1 } { #2 }
                                86 }
                               87 \cs new protected: Nn \ yoin yoinadd storekey:n {
                                88
                                      \prop gput:cnn { \yoin yoinadd prop: V \l yoin yoinadd currentarticle tl } { #1 } { }
                               89 }
                                (End definition for \__yoin_yoinadd_storekey:nn and \__yoin_yoinadd_storekey:n. These functions are documented on page ??.)
            \yoin_yoinadd:nn
                               The macro \yoinAdd itself. We first set \1_00_yoinadd_currentarticle_tl, then check whether the same article has not been
                               processed before (issuing an error in that case and finishing). Then, the article is added in \g_yoin_yoinadd_seq, the prop created,
                    \voinAdd
                                the article's name added in the prop with key article and the keys are set. If the article has a .yoin file in its sub-directory, the
                                key-values in it is added to the prop. If the file does not exist, it means things are wrong (the article should first be set up, before
                                being added to its issue by \yoinAdd).
                                90 \cs new protected: Nn \yoin yoinadd:nn {
                                     \tl set:Nn \l yoin yoinadd currentarticle tl { #1 }
                                92
